

Vision

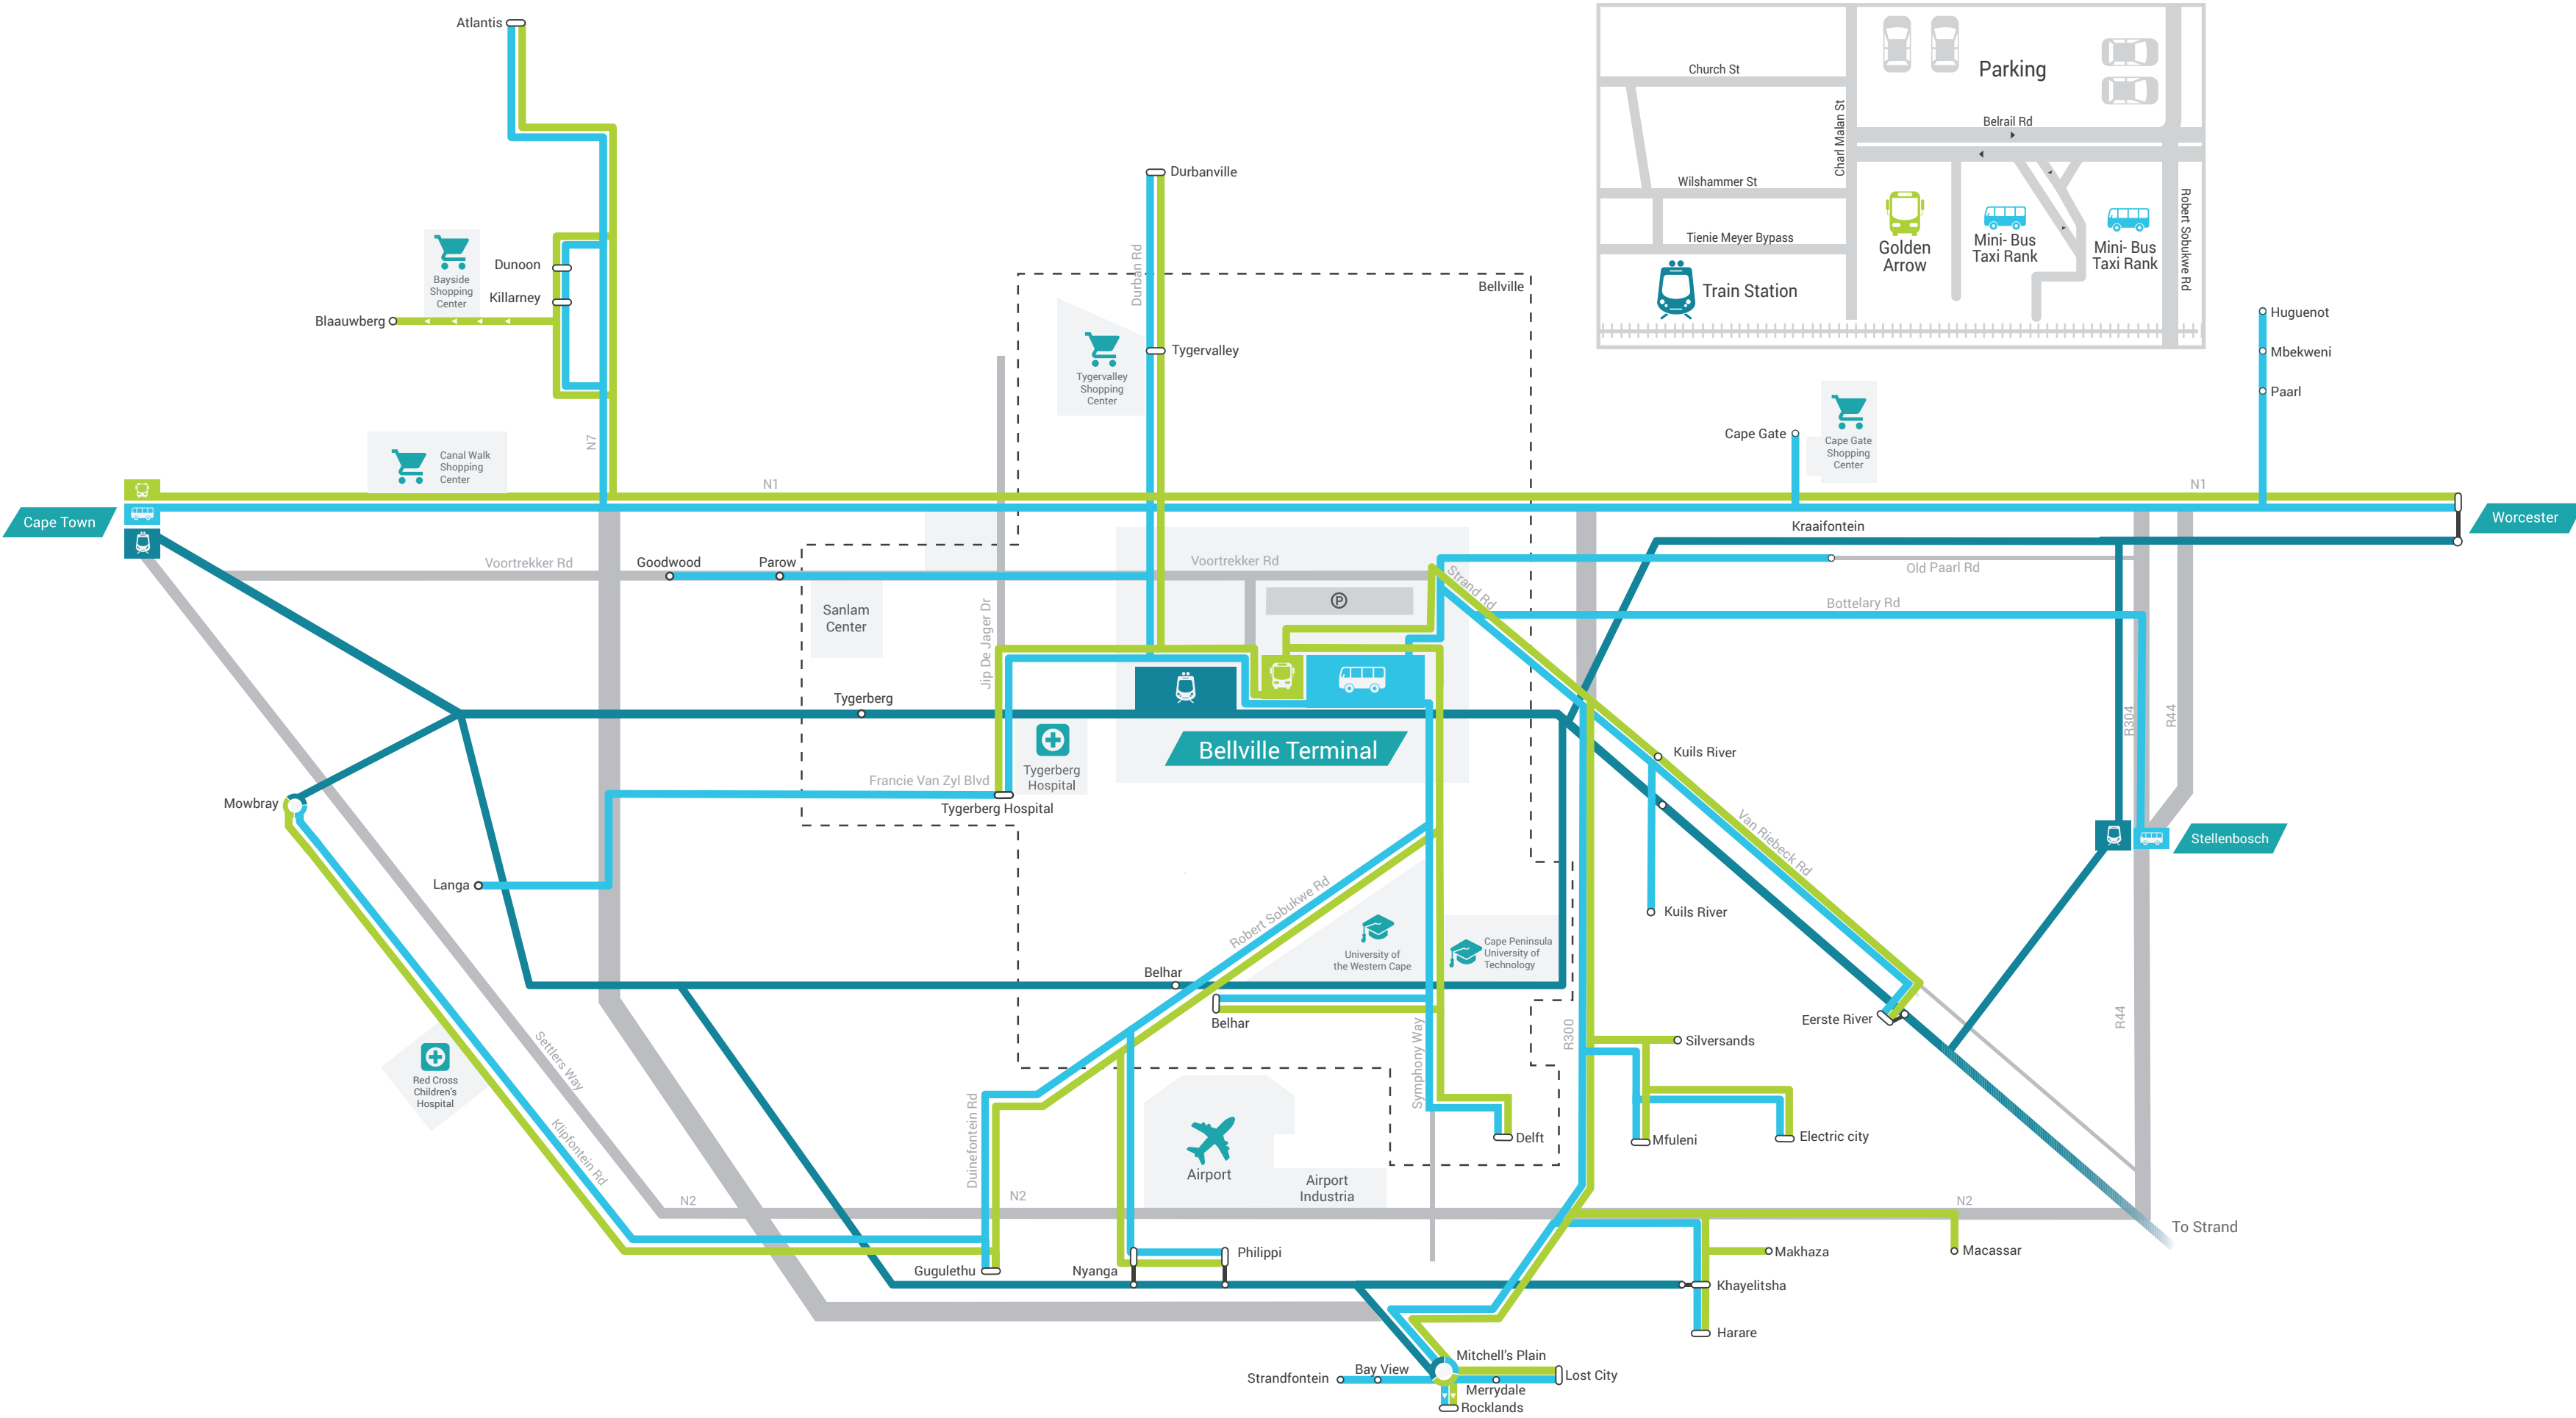

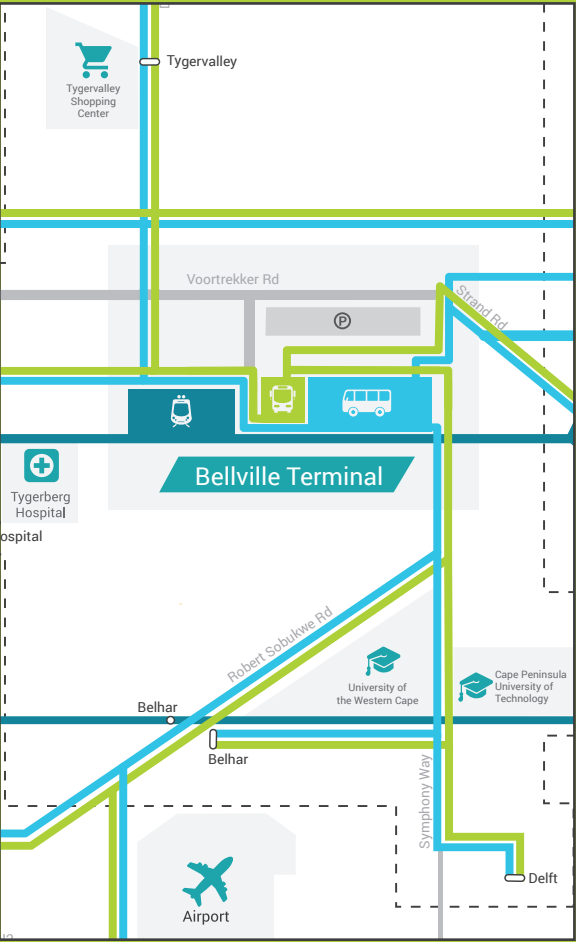

GoMetro is a public transport-oriented mobile startup based in Cape Town. Our team has developed a system that maps, stores and shares public transport route information via the most appropriate mobile channels in emerging market cities that usually do not have public transport information available. GoMetro is Google Transit for emerging markets.

Our transport data service has been designed with emerging world conditions and mindsets in mind, with simplified menu structures and data-light services, which allows commuters to get real-time, or as close as possible, information on transport services such as trains, buses or informal minibus taxis/ matatus/ angkots in their area.

Users are also able to share their own progress and delays with others - by posting a Go/NoGo to the network - which is then seen by other users on the same route. This crowdsources the status of transport networks in a city without costly tracking systems or even city government co-operation.

About the Map

The GoMetro Bellville has been generated by GoMetro Mapper - (a mapping technology developed by GoMetro) and users of public transport who mapped their transport routes.
 Get GoMetro Mapper to map your city by sending an email to : admin@gometro.co.za
